

Copier / Laser Paper Tips:

Loading Machine

- Fan material thoroughly before loading into machine. This helps to aerate and separate sheets that have been compacted during the packaging and shipping process.
- Paper is grain short.

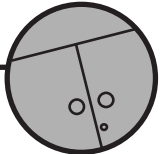

Ink Jet

- Ink jet printers use water base inks that will not adhere to "Rite in the Rain". Make an ink jet master copy on regular paper and then create "Rite in the Rain" duplicates using a photocopier.

Fuser Settings

- Use "standard paper" setting on your copier.
- "Rite in the Rain" is not a plastic. There is no risk of melting in your machine.

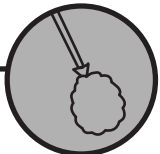

Storage

- Store material flat and at room temperature.

Shelf Life

- To assure a long and unlimited shelf life, keep your product away from moisture and sunlight.

Cleaning

- As with most papers, use a 99% pure Isopropyl Alcohol solution to clean your copier's feed and separation rollers to help prevent double feeding.
-
